## 1. Configure ip addresses to all interfaces:

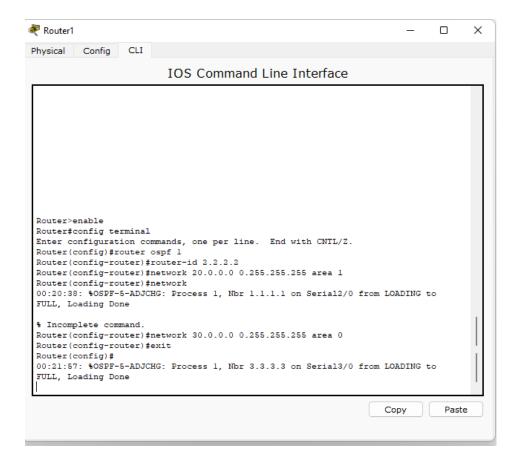

(serial-router to router, fastEthernet-router to end device)

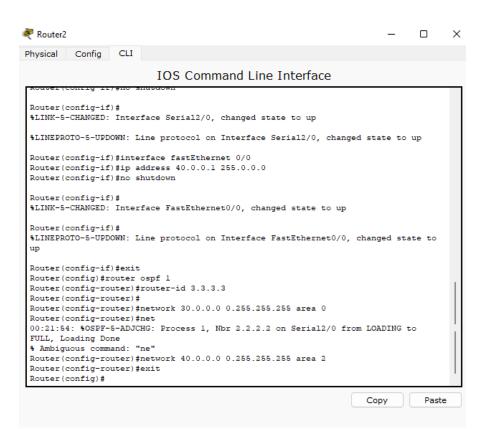

(similar to RIP exp) Router2 × Physical Config CLI IOS Command Line Interface Press RETURN to get started! Router>enable Router#config terminal Enter configuration commands, one per line. 2. Enable ip routing by configuring OSPF in all routers:

3. Show routing table for all three routers #show ip route

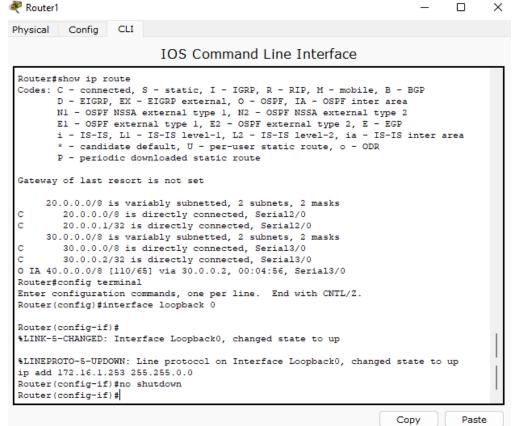

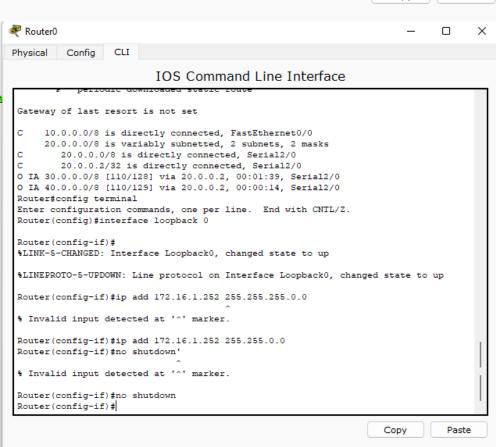

### 4. Ping from end device to other end device

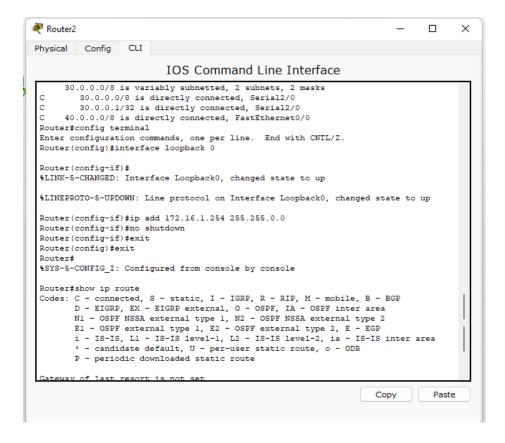

## 5. Create dedicated loopback interface for all the routers

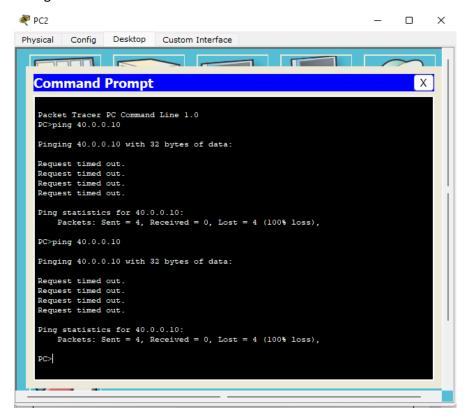

×

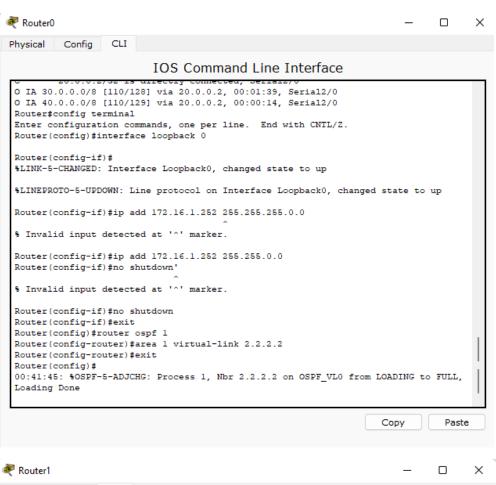

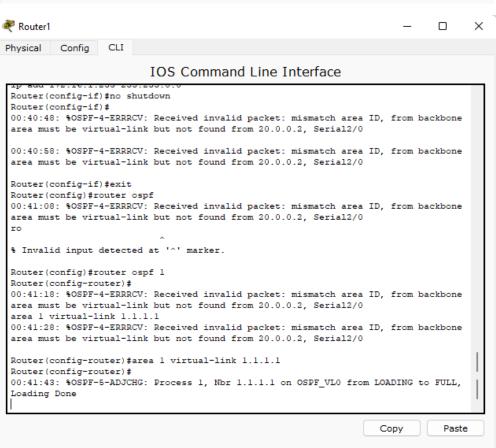

### 6. Ping from end device to other end device

7. Create a virtual link (CLI of first two routers) to connect area 3 to area 0.

8.Final Output(ping from 10.0.0.10 to 40.0.0.10):
